

Mobile health technologies in gestational hypertensive disease

W. Gyselaers

5 – 8% gestational hypertensive disease (GHG)

- Ziekenhuis Oost-Limburg: 1.918 → 140 (8.21%) GHD
- Vlaanderen + UZ Brussel: 65.729 → 3.006 (4.6%) GHD

SPE 2014

Sinds het begin van de registratie noteerden we 93 maternale sterfgevallen ($\pm 1 / 20\ 000$ bevallingen).

De meeste sterfgevallen stonden in onmiddellijk verband met de partus en waren vooral vruchtwater-embolie (N=13), longembolie (N=12), pre-eclampsie / HELPP/AFLP (N=10), bloeding (N=6), sepsis (N=8), uterusruptuur (N=6), anesthesie problemen en ARDS (N=7).

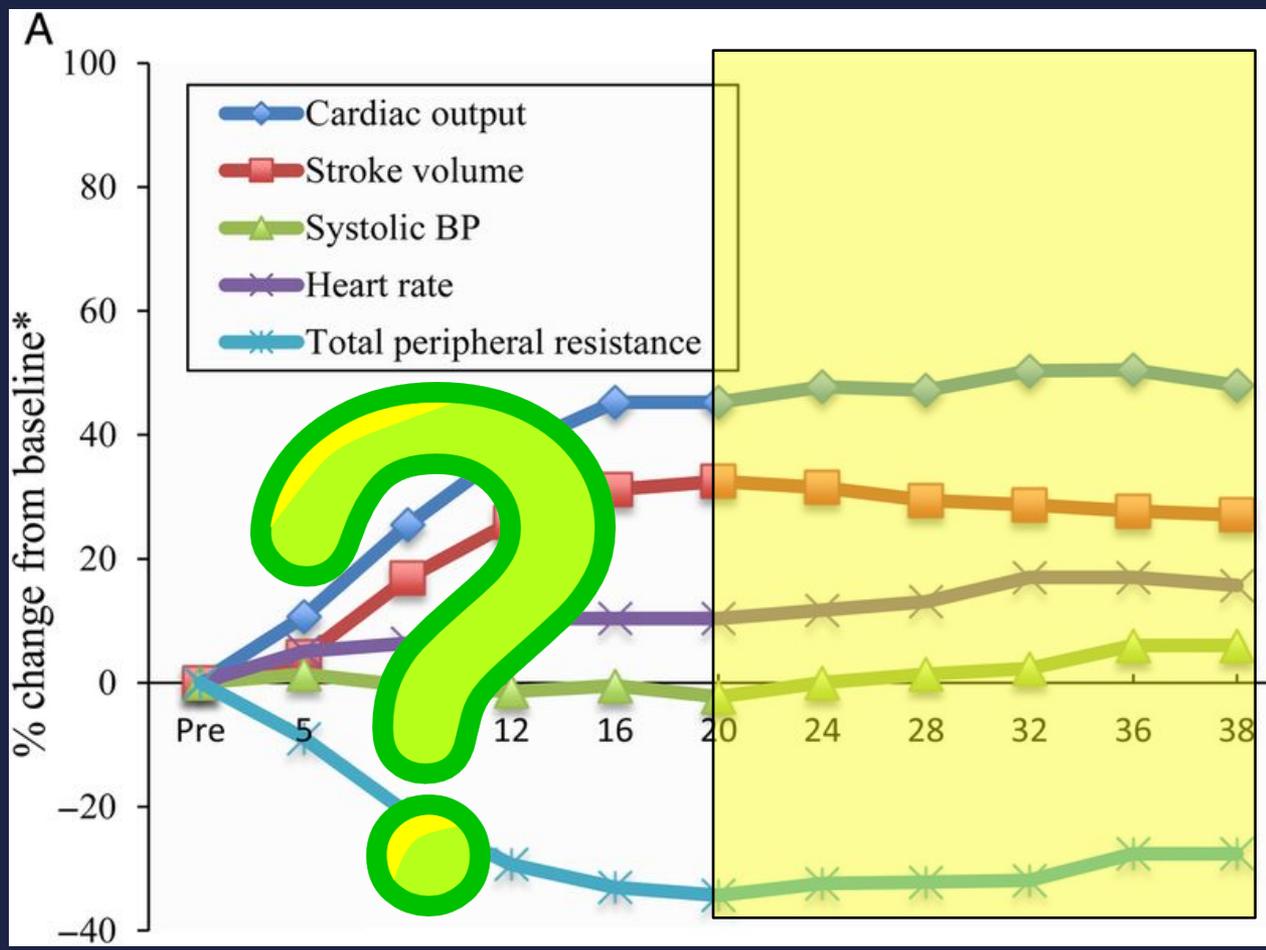

Open Journal of Preventive Medicine, 4, 91-99.

Table 4. Predictors of LBW by multivariable conditional logistic regression analysis.

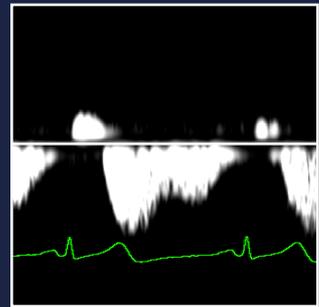

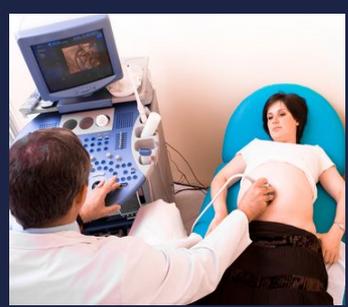

Variable	B	Adj. OR (95% CI) ^a	Wald (df)	p value
Gestation Age	0.881	2.41 (1.79 - 3.26)	33.113 (1)	<0.001 [*]
Maternal Age	1.063	2.89 (1.86 - 4.51)	21.957 (1)	<0.001 [*]
Hypertension	1.509	4.52 (1.06 - 19.22)	4.179 (1)	0.041 [*]
History of LBW	1.318	3.74 (1.03 - 13.58)	4.010 (1)	0.045 [*]

Validation technologies ICC $\geq 0,8$

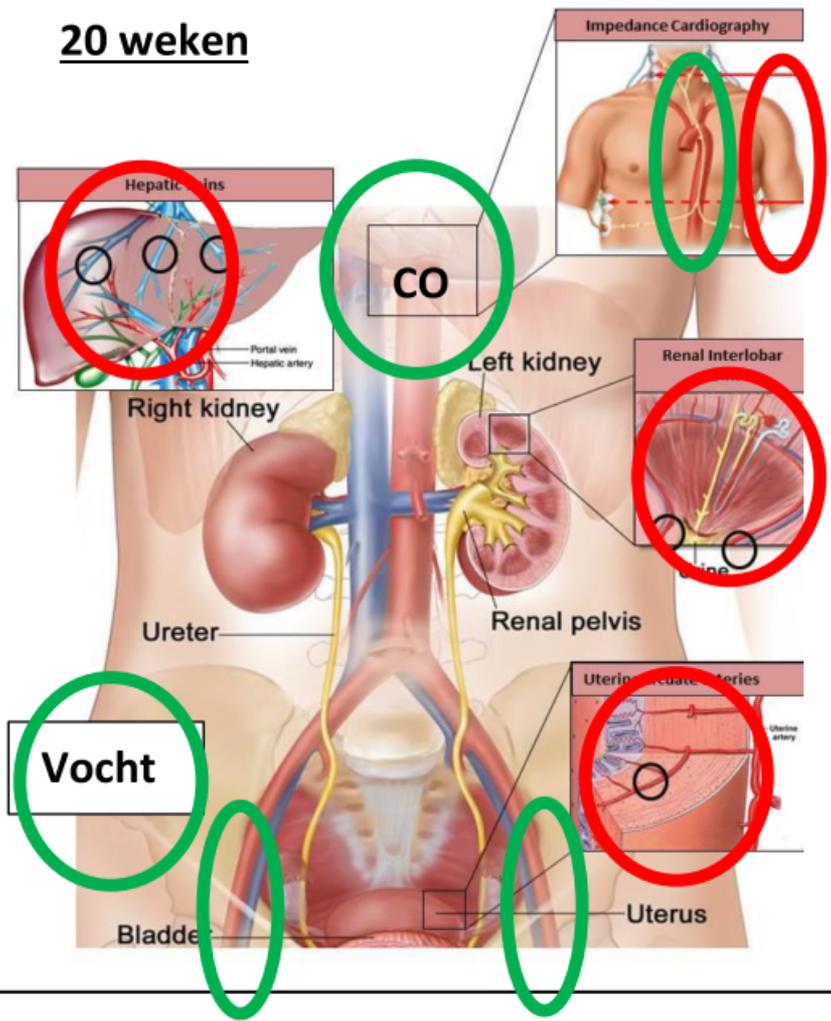

- Venous Doppler-ECG
- Impedance cardiography
- Bio-impedance body fluid assessment
- Remote monitoring

12 weken

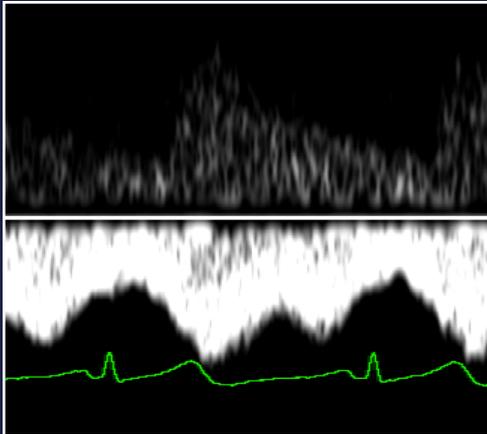

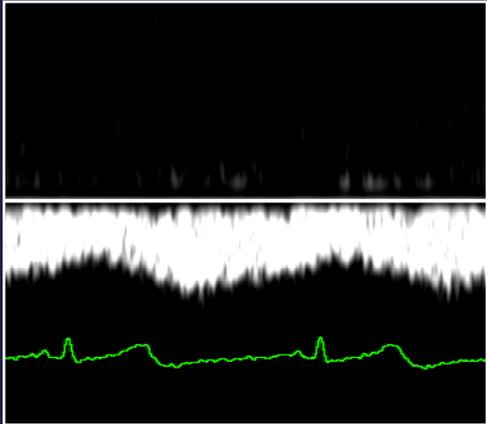

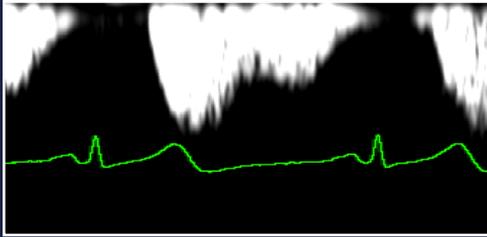

20 weken

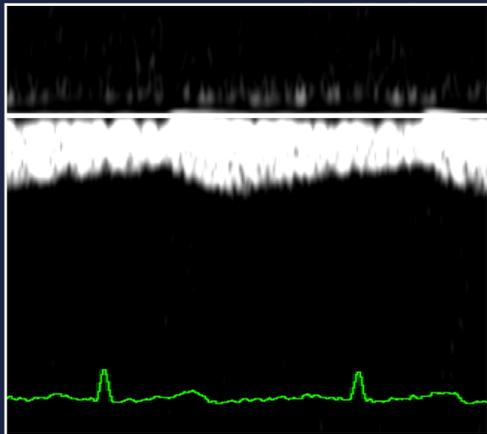

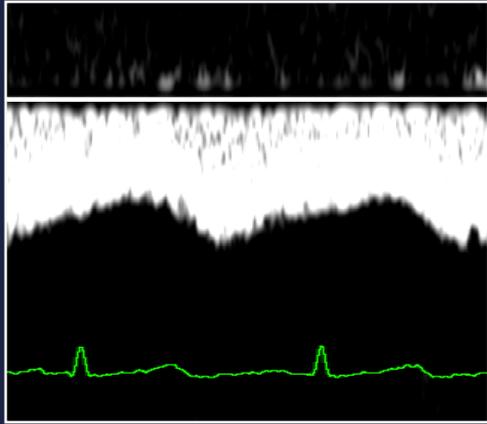

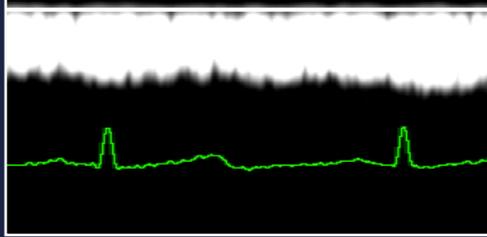

(Patho)- Physiologic observations

- Normal ↔ Pathological pregnancies
- Gestational hypertensive diseases show:
 - Different orthostatic stress responses
 - Different impact on
 - Kidneys
 - Liver
 - Fetal growth
 - **Different cardiovascular profiles**

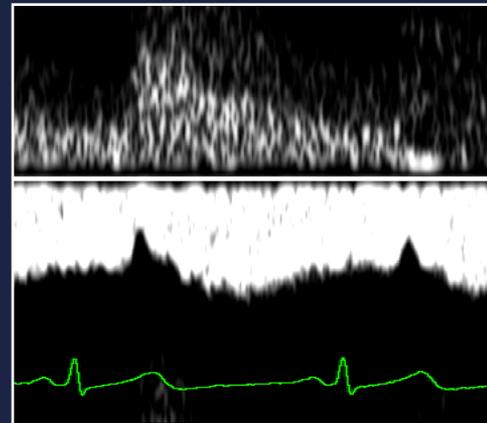

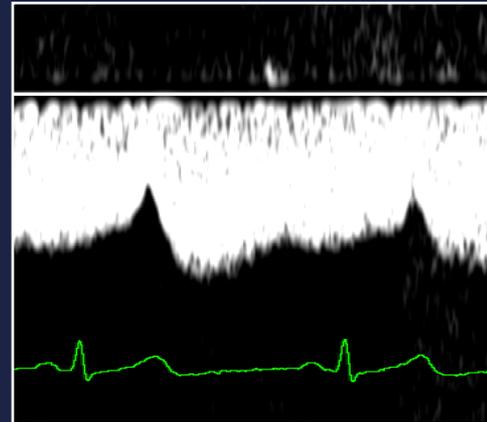

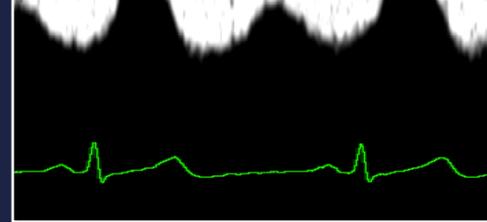

Not Pregn

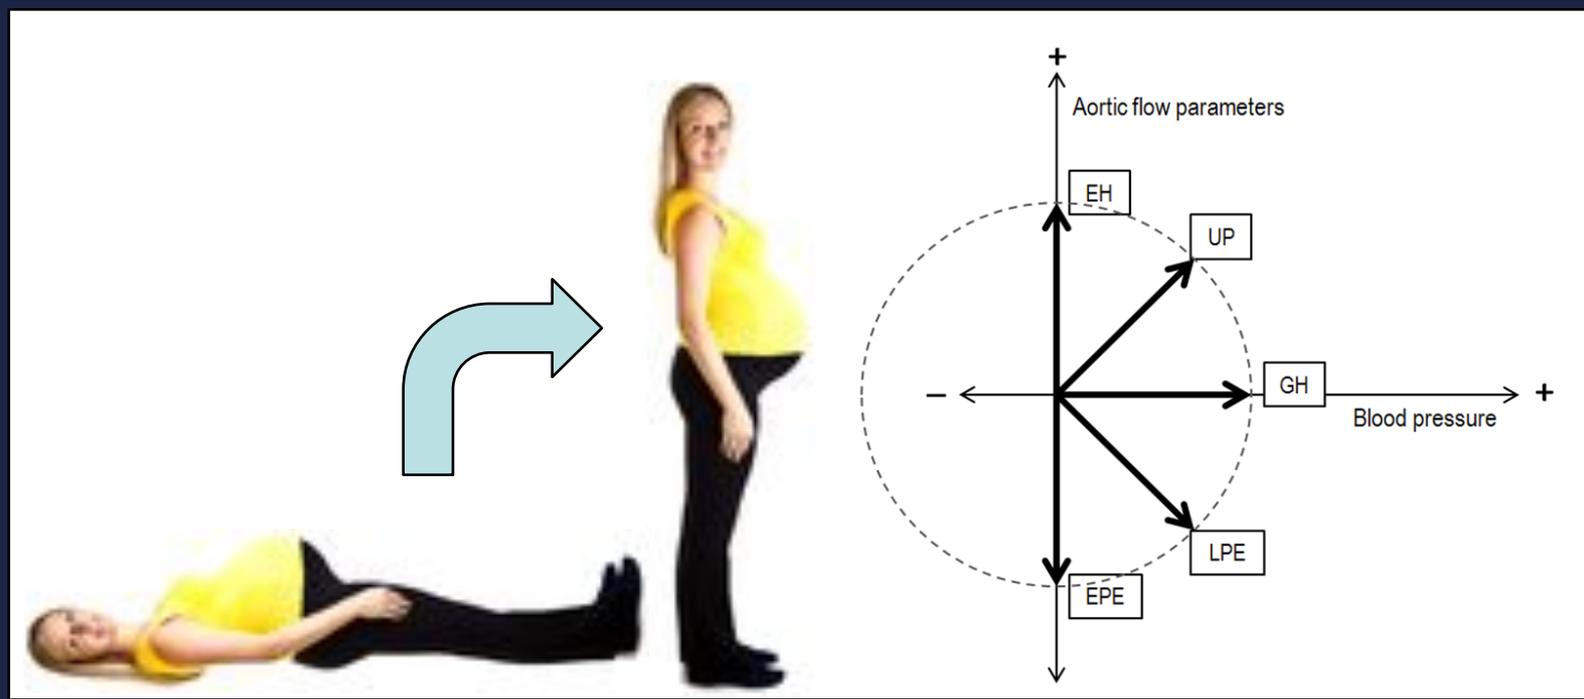

3° Tr

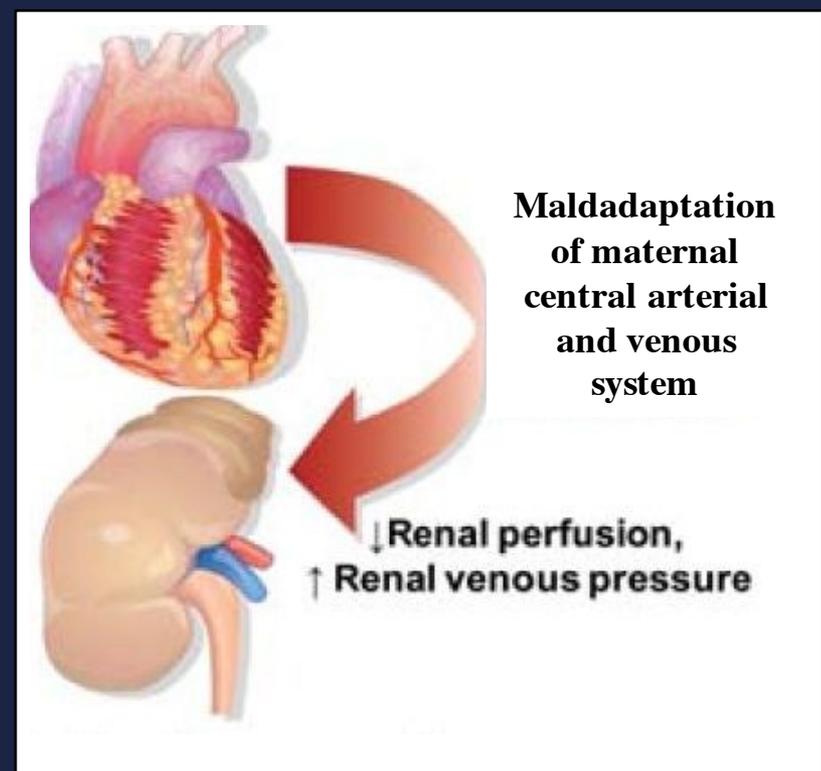

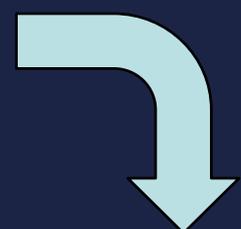

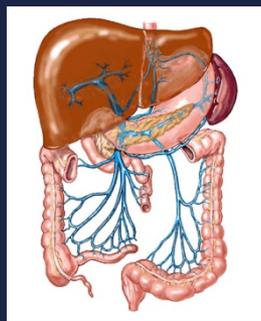

PET

Different orthostatic stress response

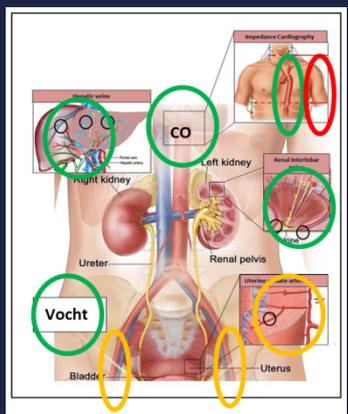

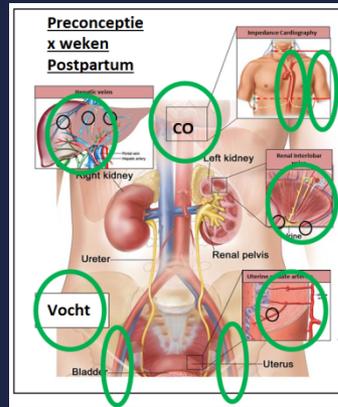

Different organ (dys-)function

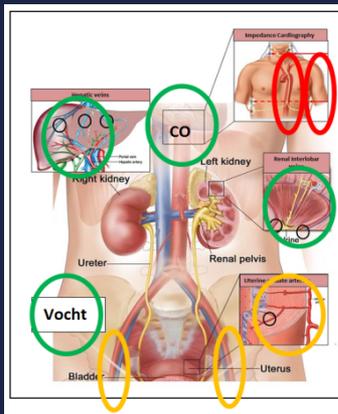

Indications

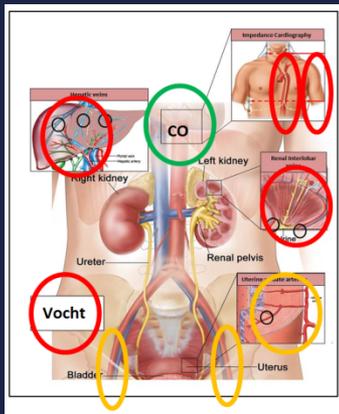

- Hypertension
- Obstetric history
- Family health/disease
- Low birth weight

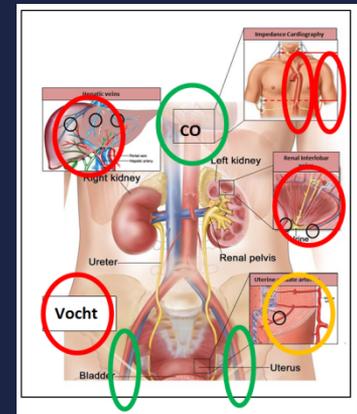

Essential hypertension

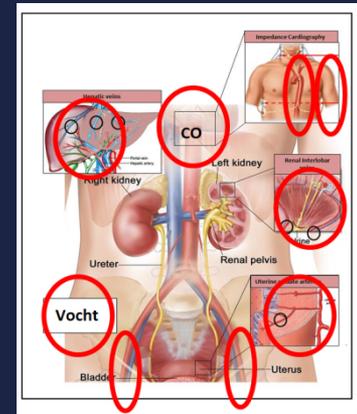

Gestational hypertension

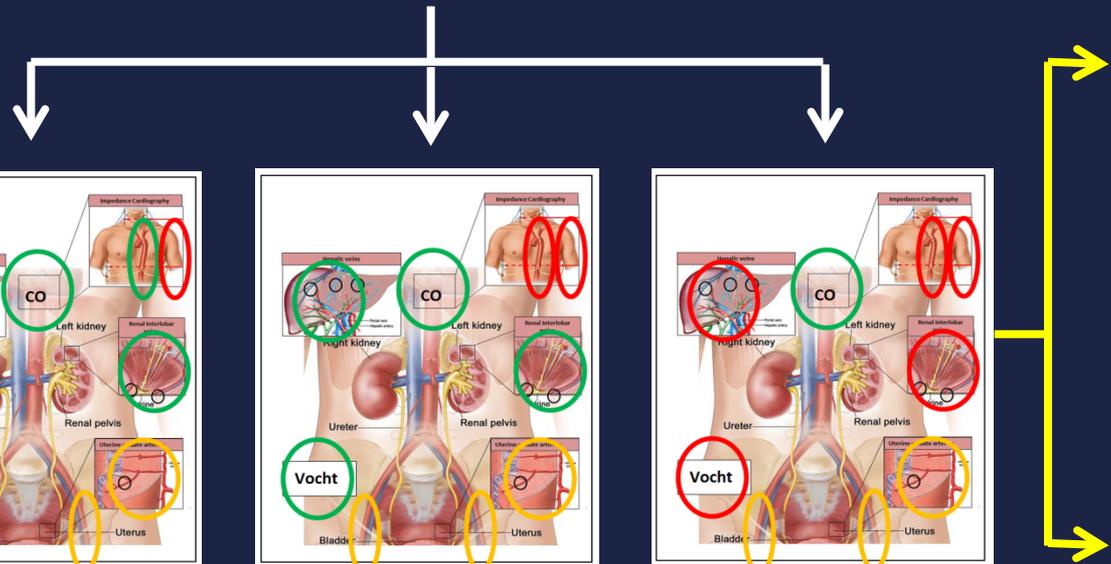

Pre-eclampsia

Maternal (mild) PE

Vascular (severe) PE

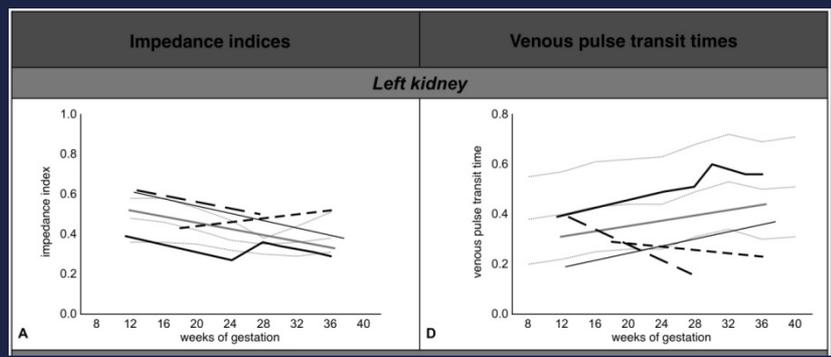

Clinical application

- Screening
- Ambulatory preeclampsia clinic
- Remote monitoring

First trimester CV profile

Low values at 12 w in GH/PE
